

Helping organizations keep track of high-risk patients in real time

hb/notify informs providers about a patient's medical encounters, which supports care coordination and reduces readmissions. For those practices participating in quality improvement programs requiring transitional care and chronic care management, this service can help ensure reimbursement for timely follow-up.

Organizations have the option to receive notifications directly into their EHR, secure email, or CSV file. For our hb/notify customers, using this service means better use of time and resources toward **more efficient care**.

hb/notify is particularly helpful to practices and other quality improvement programs that require transitional care and chronic care management.
